my Dear Gainer,

Well I hadn't finished an exam before I got your letter, but I was ready to go to one, and you have no idea how much that letter helped me out. The exam wasn't very long and also not very hard, I got thru an hour ahead of time. It sure made me feel fine. So you see you did help me even though you were not here. Now tomorrow I have Math. and I feel like I am going to make a pretty good grade.

I am beginning to think that the harder I work the better I get, but I really don't believe that I have gained anything so far, except lots of manners.
The latter part I stay up and the earlier
tier up the better I feel. Except yesterday
morning, I got up at five and studied awhile
but I was so sleepy that I went back to bed
at quarter past.
Oh, my foot and jaw are getting
along fine. It hadn't hurt hardly
any for about three days, so this
afternoon a boy named Alexander
from Dallas, and myself were study-
ing math, and we got so tired that
we decided to take a walk. Well we
did and I didn't know anything
had ever been the matter with that
foot until I came back and laid there
awhile. When I got up, it felt just like
I had stepped on needles. It's a whole
lot better though, and doesn't bother me
much of it. There were that I would come some time Sunday, but the rest of it, I know I was coming.

The thing was to visit the first I had to the see the position that I was in, you know, not to mean, I am glad you are glad to see you. You glad myself, because things they are going to have a lot of work, and I will tell you.

I want you, you know, 'cause I want to see you. I want you to see you again, because things are going to be very much better. We will go on the 14th of June, and we shall go to Dallas.

We will get there at the 14th of June, and we will start from there to come here.

We shall see you at the 14th of June, and we will see you again.

I hope you are doing well.

Your friend,

[Signature]
Gainor, I know that you are getting tired reading about nothing but lessons and exams and I don't blame you, but if I proved one formula one time tonight, I proved it a dozen times. I can say it backwards. It's eleven o'clock and the beach is just left now. I'll have to study something. I don't know myself. Such as fluid derivatives with respect to $x$. $\frac{dy}{dx} = 111 + \text{cost.}$ 

$$y = \frac{1}{3} t^3 \sqrt{5e} + \frac{22t^2}{\sqrt{5e^3}} + \frac{16}{3}$$

Find $dy$. Work this last one, please, and send it back to me. I worked it once and can't do it again.

Yes, the football team came to Houston, but I didn't get to see any of them because they didn't come out here and I didn't feel...
like going to town.

Your wish I could have been there and gone on that winter roast. One night this week the word just across from us caught on fire, and as it was all pine trees, it surely did burn. It was about four o'clock when it started and it lasted until nine. It was the first idea I have ever had of a forest fire. I must say it was real pretty. Right after supper I believe that all the boys out here went over there. Some of them took bread and butter along and of course, we had to fix some toast we tried to find a place to steal some chuckwip but it couldn't be did.

Many thanks for the postal and clipping which you sent me. I sure was glad to see that. There was also something
