

Construction On Basement To Begin In Next Two Weeks

By CAROL STARR

Tentative plans for remodeling the RMC basement have been approved by University President Pitzer; construction should begin within two weeks and require another two weeks for completion.

Included in the tentative plans is the conversion of the storage room into an area for card-playing. A TV room will be made out of the present pool room and acoustical tile and flexible lightings will be installed.

DEFINITE PLANS are in the process of being drawn up and the Student Center Board will be consulted this week on the details of the plans reports Mr. Justin Elliot, Director of Buildings and Grounds. After consultation with the board the plans will be completed.

Appropriations for the remodeling have been allocated in the university budget. Some of the construction work will be done by Rice and some of the work will be done by subcontractors.

A member of the Student Center Board reports that, as yet, no funds have been provided for new furniture in the basement.
