

'From Man To Molecule' Shown To Pre-Med Group

Russell Deter, a student at Baylor Medical School, presented a series of demonstrations on the subject "From Man to Molecule:

An Intellectual Adventure into Medicine" at the first Pre-Med Society meeting this year.

The program, which was held October 10 at Baylor, started with the clinical problem of a muscle disorder. The muscle was examined from the viewpoints of gross anatomy, histology, electronmicrography, physiology, and biochemistry.

Mr. Deter emphasized how analysis of this medical problem was directly related to undergraduate studies in biology and chemistry.
