THERE IS A PLAN . . .

Heel Grunching Walks
To Replace Mud Moats

By EM LIDAMOOD

There’s been a name change, we have new faculty members, but one thing is still the same. The campus is a mess.

The sidewalk-eating monsters and the lovely Houston weather wrought their destructive force between Lovett and Fondren this summer. The rustic look rumored to have been W.M.R.’s fond hope is fast disappearing. The obstacle courses will be replaced by the usual Rice-Girl-Heel-Grunching type sidewalks.

CONTRARY TO the usual vagueness, this has been found to be part and parcel of an actual Plan. The Board began a major building program in 1945 which has culminated in the landscaping now obvious on campus.

The original idea was to blend the more archaic buildings on campus in with the new. The completion of the forecourt in front of Lovett Hall was the first major step, followed by the area.

THE TWO BUILDINGS under construction at the present time were not part of the original (Continued on Page 6)

plan. Rayzor Hall is a boon to the University made possible through the generosity of Mr. and Mrs. J. Newton Rayzor. Comment on the actual stage of the planning consists of a faint grumble from laryngitis-stricken Dean W. H. Masterson.

The new Van de Graaff accelerator is an addition to the present one which will enable the physics department to conduct nuclear experiments not before possible here.

Rayzor Hall will be used to provide space for the humanities department of the University.
