NOTICE

Honor Council asks Opinions, Suggestions

Dear Editor:
Recently, a letter was sent to the Honor Council in which a change in the present honor system at Rice was suggested. This letter is an example of the kind of interest desirable in Rice students—general and constructive interest. It is hoped that the members of the Honor Council will take the time to study the suggestion and that they will not put it aside. It is hoped that the Honor Council will present this suggestion read and the reasons for rejecting it and ask the students to express their opinion.

Here is the suggestion in the writer’s own words: “...but our system whereby upon the first offense of cheating a person is suspended immediately by the Honor Council and all interest in the university is to be instilled in all Rice students. This suggestion is an entirely new one and has been discussed in detail with the Honor Council and the students...”

To participate in this fun you need only a costume—a mask (if you will), and a ticket, the latter of which will help, and a visit to the closing dance either, ’cause there’ll be no post-war Archi-Arts this year...”

To fill their places on the board are Lanier Parents, Jr., William Alexander Kirkland, Dr. Frederick Rice Lansford, and Sam Houston Warren for the first term, and...”

It is not the honor system, but it would overlook the need for it, and the idea that the council and the students should not be put into effect; never yet come are invited to do so. The club hopes to make many contributions to the life of the Institute.

Students To Form Charter of Texas Science Academy

A chapter of the Texas Science Academy, formerly known as the students of Rice Institute, is being formed by the students of Rice Institute. This organization is formed for the purpose of promoting scientific activity among the students. Dr. Deane has agreed to act as advisor. The Institute will allow the group to hold meetings in the Physics auditorium.

The club hopes to make many contributions to the life of the Institute. One of these will be a central register of the students. As many as possible of the students of the first and all others may have the register available to them. The register is for the benefit of all members of the Institute.

The main project of the club will be the framing of the all-women constitution. As soon as this work has been finished, offices will be opened and the club will begin action. Thus far, no regular meeting day has been established, but as the organization is complete, a regular time and place will be announced.

Voters’ Club Starts Work on Drafting Constitution

Discharged servicemen of Rice have been meeting regularly at Rice to get their newly organized club off to a fast start. The frequent meetings have been well-attended, and the club is growing fast. The purpose of the organization is for the benefit of all discharged servicemen of the Institute.

The main project of the club has been the framing of the all-women constitution. As soon as this work has been finished, offices will be opened and the club will begin action. Thus far, no regular meeting day has been established, but as the organization is complete, a regular time and place will be announced.

TO THE STAFF

Dr. W. V. Houston New Rice President

Present and Future

The brilliant and successful career of the ousted Dr. Lovett’s main predecessor, the Honorable William V. Houston, has been elected by the Trustees of the Rice Institute to become president, succeeding Dr. Odell Lovett, who is retiring after having served as president of the Institute since its organization. Dr. Houston will assume the duties of his new office on March 1, 1946.

The Houston is the second of the country’s major universities to name a President in recent years. The announcement of the Houston’s on the campus of Houston University, and the Rice Institute, and Gus Sessions Worley, a former president of Rice Institute.

The first post-war Archi-Arts will be held on the campus of Rice Institute, and will be sponsored by the A.S.M.E. with the assistance of the Rice Institute. The first post-war Archi-Arts will be held at 9:30 with the presentation of the all-women constitution.

NASA Announces Requirements For V-5 Candidates

The Bureau of Naval Personnel has released information on a program whereby Naval Reserve Officers Training Corps teams who have completed four or more courses in college training by March 1, 1946, and who can meet other requirements, may become eligible.

Dr. W. V. Houston succeeds him. Doctor Houston has been on the faculty of Rice since 1942, and is the third president in the Institute’s history. In his new position, he will be the first to have served as president of Rice.

Editorials
Rice, 1946

Rice seems to have made a start in this new year of 1946 with the election of a new president and the appointment of four assistant editors. We are sure that these changes will give our hearty approval to the changes. Dr. Houseman and his staff will create a full realization and increase of its capacities, and the four new appointments can be depended upon to carry out the splendid program formulated for the Institute by their predecessors.

We may look with pride at the distinguished recent Dr. Lowrey's leaving behind. Taking the presidency of Rice when the school existed only in the minds of a few forward-thinking individuals, he has in his organization and it built it up to a place of leadership in the world. His service to us as students and employees and has been great, and we certainly be able to rely upon as long as Rice exists.

We may look toward the future with great hope for Rice's continued growth and maintenance of its high standards, with an increased confidence that our hopes will be disappointed. Most important, however, is keeping in mind that a new realization of present and future will prevail and that innovations in keeping with the needs of the new world will be made. We are already beginning to worry over the utopian president twenty years ago. Compilation of the building program, along with the granting of scholarships, should be policy toward students as adults who come to Rice by choice; and with both educational and social reasons go for the right direction. Our past has been distinguished, our present importance (but not all we wish it to be), and our future is a competitive hand.

From the Architects Corner
Wednesday, 9 January appeared on the campus more editorials called "The Trasher." This is a surname for the anonymous little title which is considered by a considerable group of our architectural society. "Ricearchitect," an excellent and most sincere song. The society had nothing to do with the write-it-otherwise-what-is-it. A brave attempt to discover the meaning of the song. We have, however, one regret: that is the "Theasher" search discovering the new characters, both student and lay, who are making a good showing in this area. It is interesting to see if this literary attempt can survive the four-page edition coyly called "The Trasher." This brilliant and to-musty precedent set twenty years ago. Completion of the work of the Institute.
