Dr. Conant Discussed Education Problems In His Speech

"We pay a price for fundamental democracy in our underdeveloped school system," said Dr. James Bryant Conant, president of Harvard University and one of the most noted educators in the country, in his speech Thursday night before the Physics Amateurs. "The price is our failure to locate talent at an early age and prepare adequately during the high school years.

There are several problems involved in our teaching methods, but they are not new; they are just as old and real today as they were when I was a boy. We pay the same price for fundamental democracy in our school system as we do for freedom in the field of thought and religion."

Dr. Conant made a distinction between general education, vocational education and professional education. "Beyond the high school, vocational and general education can be considered in the same light as the training of the three-cornered institutional. The expansion of these institutions and the problems they are facing seem to be of great importance. I believe that the training of citizens for public, private and professional life is more humanitarian studies also in the practical arts and in agriculture than the training of students who wish four years training beyond the high school. Therefore, it is more humanitarian to help all the students in a high school that the percent who go to college are those students who can really benefit from college education."

Stand We So Straight

Several weeks ago some thirty-five of the fifty-two existing organizations at Rice received letters asking for donations to a student fund for the Shriners' Crippled Children Drive. William Gandin, Freshman, veteran, and a Shriner, had conceived the idea of establishing a goal of $500 to be raised by the students through their respective organizations. By Monday he had received only oneanswer, a literary society had contributed fifteen dollars.

One of the points made in the letter was that we, the students of Rice Institute, are oblivious to the suffering and need of those outside our group? Mr. Gandin says that anyone who could see the underprivileged crippled children at the Blinds clinic in the Methodist Hospital would not fail to support this. Surely those organizations who have and will make several hundred dollars on hrape school dances (credits which will only be used on private parties and planties) can spare fifteen, twenty, or more dollars to help these children.

The money which is raised in these drives goes directly into a medical expense fund. All other expenses incurred will be paid by the Shriner's themselves. This campaign ends the failure to resume the Engineering Shows will rob the school of the value of the school's reputation of any school is built upon the academic heritage by reviving the Engineering show.—H.L.
