"Pink Things" spout from stadium Astroturf

by MURK LINOTYPE

Once again the Trasher has been granted an exclusive interview with Dr. Lasio E. Bernard, III, Professor of Scientific Sciences at REI (Reality Engineering Institute), who has in the past been hailed as one of the nation's foremost experts on the reality crisis and the related field of bozonry. He has written several books on the subject (his most recent being Getting Along Without Reality, published last year) and several articles, including one in the November, 1974 Weed Eater's Digest on how Congress got US into this mess.

Dr. Bernard has been very active on the lecture circuit, having given many talks at REI. In the past few months, however, he has turned his attention to researching the more fundamental problems of reality. This line of research led him to the hypothesis and subsequent triumph of discovering one of the bozon, claimed to be one of nature's most fundamental particles.

In this interview, Dr. Bernard tells us how the impinging science of bozonology can solve the reality crisis.

Trasher: Dr. Bernard, what exactly is the science of bozonology?

Dr. Bernard: Bozonology is, of course, the study of bozonas, one of the most fundamental nuclear particles and their impact and meaning. Several years ago when I first started studying bozonosity, everyone was interested in the effects and not the causes. Bozonology as a science just didn't exist.

However, after the reality crisis abated somewhat due to the federal government's imposition of reduced thought limits, I had more time to devote to the problem. From some predictions I made this winter, which have recently been corroborated by one of my research students, Dr. Randolph Hanson, we were able to generate formulas and deduce some of the formal equations which we have named bozonology.

Trasher: I haven't seen Dr. Hansen's name mentioned much.

Bernard: We had to keep his name out of the papers while we located his next of kin. 19 other not talk about the incident at this time—suffice it to say that the whole matter is not fortunate.

Trasher: Pity, that.

This year several "fun-for-everyone" events on Friday night have been added to the Rondellet schedule to accompany the traditional Saturday events, the Beer-Bike race and the Formal Dinner-Dance. Rondellet coordinator Blythe Faker describes some of the multifaceted possibilities for fun-seekers and other Rice people.

"Friday's activities begin at 4:30pm with the Carnival Booths and Concession Stands in the academic quad or examine the other possibilities, including a Giant Spades Tourney in Baker Commons for the financier types ($25 first prize, $50 first and $25 second prizes). To relieve the tension caused by such high stakes, you can drink the 15 cent beer which will be provided all night and then jump into the All Night Zapide and Mudflug between the Physics Building and Jones. This overgrown muguddle is provided for whatever playful perversion possible.

"To get in the mood for the mud (if spontaneity is lacking), see the cartoon and film festival in the Physics Amphitheater, featuring Charlie Chan, Laurel and Hardy, and the Marx Brothers.

"No Friday night would be complete without music and dancing to hit the right mix (if you're not loose already, there is still hope), so the popular Houston band Liberty will play for a street dance outside Anderson Hall.

"Aromatic indulgence to all this hectic activity will be a free showing of the movie Romeo and Juliet in Hamman Hall at 7:30 and 10pm.

"After Friday night, arise by 2:30pm for the traditional Beer-Bike Race in the stadium lot. This year beer will be sold for 15 cents. Saturday culminates with the traditional Dinner and Formal Dance at the Continental Houston Hotel. Dinner will include Manchester Strip steak, Rice Pilaf, salads and creamed shrimps and a choice of desserts. Tickets will be $13 per couple with dinner, $6 per couple without dinner. The dance is R.O.Y.O.; tickets may be purchased from your college social chairman or in the SA office. No tickets will be sold at the door; dinner tickets must be purchased by 6pm Thursday and formal tickets by noon Saturday.

"Sunday will feature a song-fest to soothe your hangover; the college will also be presented. Rice student Jay Smith and local progressive country group "Wheatfield" will perform at the Off-Campus Concert Sunday night from 8 to 12.

Faker concludes, "This year's Rondellet has something for everyone every day of the week so take advantage!"

Preparations for this year's Rondellet festivities have already begun. For more details, see story below.
Researchers find turnips have 140 IQ, whistle Dixie

by RENFIELD K' NOONE

Question: Dear Mr. Noone:

What is the correct thing to wear to a suicide? I have received several invitations recently, and don't know what to do. Is a going-away present necessary? Signed, Dribble, Dribble

Answer: Dear Cur: 

To answer your last question first, no, a going-away present is not necessary, nor is it generally desirable. As for what to wear, that depends mainly upon the occasion and mode of death employed. There are two main categories, outdoor and indoor, and dress should vary accordingly.

Probably the most common form of outdoor suicide is the precipice from which the victim jumps at semi-formal, coats and neckties should be worn by all attending. A cowboy hat is optional.

Immolations are generally attended by a large number of invited persons, so care should be taken to distinguish invited guests from the general masses. Long, flowing religious robes of either black, red, yellow, or white should be worn by invited guests. Hot dogs are considered gauche, but marshmallows may be brought by close friends or immediate family members.

Drownings are black-tie affairs. Dress is formal. Rubber duckies may be brought by guests as desired.

Indoor suicides are more formal affairs than outdoor suicides, as there is much more control over the environment and atmosphere of the occasion.

Shootings are generally attended by only a small group, dress is black-tie formal, and some sort of fur, preferably a fur hat should be worn.

Poisonings are the most sumptuous form of suicide; first a dinner should be given during which the poison is administered (the poison should be one that takes effect in one to three hours) and smoking should be followed by a masked costume ball. Costumes should favor, but are not limited to, sixteenth or seventeenth century Italy.

The most formal kind of suicide is the vascular-inclusive. Dress is turn-of-the-century white-tie. Gentlemen must wear caps, ladies must wear low-cut formal gowns.

In all suicides except poisonings and immolations, the victim should be made to feel the tiniest bit demisexual, following the poets advice: "Naked I came into this world, and naked I shall leave it."

Do you have trouble knowing what to say when they kick in your door in the middle of the night? If so, you should read R.K. Noone's new book: "The Midnight Knock — And How To Answer It." Send $8.25 in coin to Knockback, p.o. box 366, Cibola, Fredonia.

Blasted halts swim meet here

by A MEALY COUGHDROP

Sexist public ultimatum and research group (SEXURG) members' decision have been made to refuse changes in Texas and national legislation. "If they make it legal, we're going to shut it down," they announced. No comment by Packer on newsworthy developments.

New opera sucks igneous nudes

I saw her as a most beautiful constellation of ellipses, parabolas, and sine waves in perfect symmetry as she slithered into the living room. I sat down comfortably on the sofa sketching free body diagrams as she sat down beside me. I felt the firm pressure of her thigh against mine. I would judge its modulus of resilience. I felt her warm breath, (approximately 102.4 F.) as she leaned over and kissed me lightly (0.75 newton). I glanced down only to see a molten mass that had once been my multi-log-log slide rule. She said nothing, merely sat there, her gaze fixed on me.

The mystical qualities of the pyramid, only recently discovered, are soon to be utilized at Rice.

Honor Council imprisons editor, threatens purge

In a surprise action yesterday afternoon, the Rice University board of Governors plans to construct a huge steel-and-fiberglass pyramid over a large part of the Rice Campus.

The mystical qualities of the pyramid, only recently discovered, are soon to be utilized at Rice.

Among many advantages of the plan, it was noted that the giant structure, to be built by Houston contractors Drown and Shoot, will improve grades, increase medical school admittance rates, keep the rain out, keep the birds out, and improve grades. The strategic placement of the 1.414-kilometer square construction, will hopefully improve the performance of the Rice football team. Original plans called for the pyramid to cover the women's colleges, but due to pressure from the athletic department, the agreement to foot 5% of the $20 million bill, the base of the pyramid was moved to accommodate Rice Stadium instead.

It will also prevent Food Service meals from spoiling, even when left out for weeks, and keep razor blades sharp.

Detailed construction plans have not yet been announced, but it is expected that construction will begin within the next several weeks. Drown and Shoot complete construction of the federally financed Transisteric piping.
In this issue

Dr. Normal Quackerman, President of the University of the Universe, recently delivered his 37th triennial lecture at the University of the Universe. He spoke on the topic of his book, "The Thinking Man's Guide to Importing Cheese," which was published last year. The lecture was attended by a record 3,500 people, and the University's student newspaper, "The Sillpoply," published a special section on the event. The section included an interview with Dr. Quackerman, where he discussed the importance of understanding the economic factors that influence the importation of cheese. The interview was followed by several articles on related topics, including the history of cheese and its cultural significance. The section concluded with a set of "Bernard's Helpful Hints to Beat Reality," which included tips on how to survive in a world where reality seems to be crumbling around you. The hints were designed to help readers maintain their sanity and adapt to the changing circumstances.

Also in this issue: Little Tiny Squares, page 2; Senile Profs We Have Known, Part XIV, page 9; Procustea: New Microorganisms Found in Common Foods, pages 5-9; and more.

In the next issue, the Sillpoply will feature an article on the latest trends in cheese production, as well as a review of the recent cheese festival in the town of Cheeseville. The issue will also include a special section on cheese and health, with articles on the nutritional benefits of cheese and the latest research on its impact on health. The section will be followed by a set of "Bernard's Helpful Hints to Beat Reality," which will offer practical advice on how to deal with the challenges of life in a world where reality seems to be crumbling. The hints will be accompanied by a set of "Sillyport 6 and 7," which will feature humorous cartoons and stories that will help readers cope with the stresses of daily life.

Know why we carry Advent speakers?
Because they're terrific, all three of them.
You can spend a tubful of money and not do nearly as well.

The reason that Advent speakers, largely on the strength of word-of-mouth advertising, have become the standards of value in the stereo business is that they do exactly what they are represented to do.

They weren't designed in imitation of anyone else's, or to make a broad line of speakers with entries every ten dollars or so to make sure to get everyone's money. What they do is what you really hoped for, at a price that's less than you expected to pay.

There are three Advents. The original, which costs $110 to $125 depending on cabinet finish, was designed to compete with the most expensive speakers in every audible respect for a fraction of their price. The Smaller Advents, which cost $76 have the same range as the originals (not close, but the same), and essentially the same sound, but they won't play quite as loud. The new Advent/2's, which cost $59.50, come within a half-octave at the bottom end of the other two (plenty low enough for the heaviest rock stuff and virtually everything else), and are the lowest-priced speakers you can find with absolutely convincing overall sound.

Now. The way Advent speakers help us to set things up, we can offer three systems — at $350, $425, and $659 based on the original, the Smaller, and the Advent/2. Each one of them has a good reason for being that's based on people's real needs, and each one of them is unbeatable at, or anywhere near, the price.

FOR YOUR PROTECTION AND PEACE OF MIND for five full years from the date of purchase, upon presentation of the component equipment to our service department, we will replace or repair, for the original owner, all defective electronic parts where the defect is due to faulty workmanship, free of charge.

In the case of tape recorders, record changers, and turntables, for two full years from the date of purchase, upon presentation of the equipment to our service department, we will replace or repair, for the original owner, all defective mechanical parts, rubber drive parts, and tape heads free of charge where the defect is due to faulty workmanship. This warranty does not cover phono stylus.

OUR ONE YEAR SPEAKER EXCHANGE: For one year from purchase date, you are entitled to exchange the speaker system(s) shown for any higher priced speakers available at Home Entertainment, Inc. At that time, full original purchase price indicated, less sales tax, will be credited against the new selection. Exchange speakers are subject to our inspection, cabinets must be free of scratches and gouges, and the speakers must be in original undamaged condition. Exchanges cannot be made for used or special sale-priced speakers. The certificate must be presented by original purchaser at the time exchange is requested.

one of three groups: The so-called "standard" particles, consisting of particles known to pre-bozonic physics; second, the family of boxonic particles; and third, particles formed by interactions between the standard and the boxonic particles. Some in this latter group have also been observed by pre-bozonic physicists, much to their puzzlement. I'll say a little bit more about the complex particles later, since they are critical. This whole field of study is called boxonomic mechanics, and great discoveries are being made daily. However, I myself remain more interested in the gravity for philosophical interpretations offered by boxonic mechanics, and this assures us on the outlook that is the added element which distinguished boxonomic from just new reality's by the eminent Dr. Leslie K. Bernard.(1)
